● PROJECTS

1 JAN 2024 – CURRENT

Django Based Fetal anomalies Detection using explainability AI

The Django-based XAI model for fetal detection predicts anomalies using machine learning and provides explainable insights through SHAP and LIME. Users input data via a form, generating predictions with visual explanations for better understanding by healthcare providers and patients.

10 SEP 2023 – 13 SEP 2024

Diabetes Prediction System using Machine Learning

A **Diabetes Prediction System using Machine Learning (ML)** is designed to predict the likelihood of a person developing diabetes based on various health metrics.

21 OCT 2018 – 19 JUL 2019

Wireless Robotic arm controlled by Android Application

In this project, I used Arduino to control a robotic arm and developed a wireless Android app in Java, enabling object manipulation in diverse environments. My efforts earned me certificates from the Computing Faculty and Bahir Dar University, the Best Project of the Year award (2018/2019), and second place at an international conference.
